Export An Artboard

HOW TO EXPORT AN ARTBOARD FROM ILLUSTRATOR

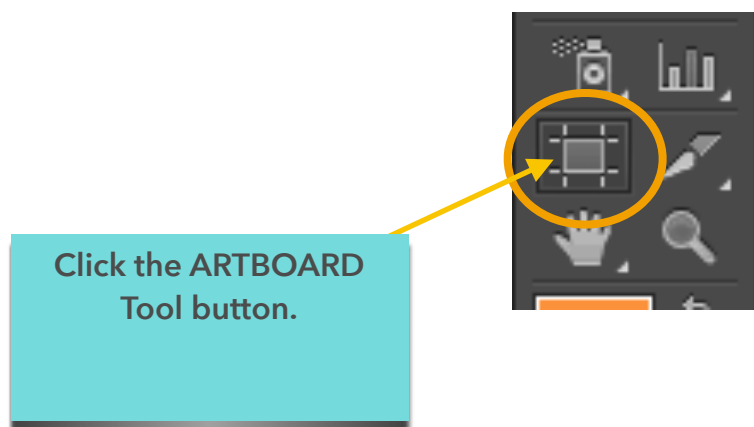

So you've been working on multiple art boards and now you'd like to single out a certain Artboard from the rest. This tutorial will guide you when you want to export a certain Artboard and save it as a separate file or image.

See the steps below:

1. In your workspace with multiple art boards and design, identify the art board with the design or elements that you'd like to export and save separately. In this example we are going to export Artboard 2.

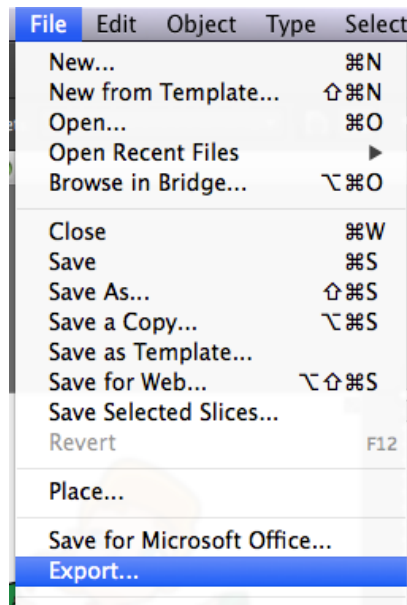

2. Next is to click on the ARTBOARD tool or press “SHIFT + O” on your keyboard.

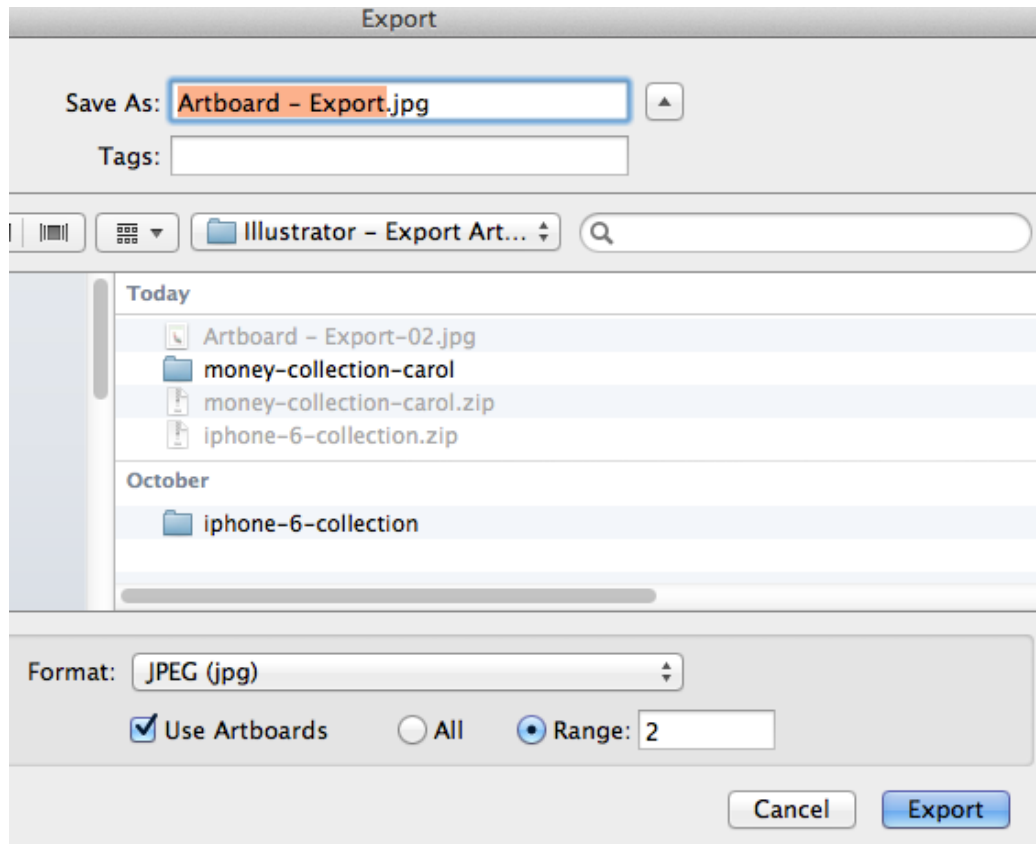

3. After clicking on the ARTBOARD tool, select the ARTBOARD that you'd like to export.
In this case, we will select ARTBOARD 2.

4. After clicking on ARTBOARD 2, select FILE -> EXPORT.

5. In the EXPORT dialogue box, select the folder and supply the file name that you prefer. Make sure that you check the box beside USE ARTBOARDS and in the RANGE field, type in “2” since we are going to export ARTBOARD number 2. (If you’re exporting ARTBOARD 1, type 1. If ARTBOARD 3, type 3 and so on).

6. Finally, select the file format that you like and hit EXPORT. You’ve now successfully exported your selected art board into a single image file.
